It's common knowledge that the number one cause of work-related fatalities is vehicle accidents. Most companies have at least one truck, if not a whole fleet of vehicles, and their drivers face the hazards of the roadway day after day. Sometimes a trip ends tragically.

Now, a new technology threatens to increase the accident potential for drivers. In more and more companies, cellular phones are being used by construction, service and delivery personnel, as well as by management levels. According to one research study, the use of a cellular phone while driving increases the risk of having an accident four-fold. Another study found that having a cellular phone in a vehicle increased the risk of being involved in an accident by 34 %. The U.S. Department of Transportation reports an increase in the number of complaints about drivers talking on their cellular phones while operating a vehicle. Critics of these studies argue that the research is poor and does not make a decisive connection. Besides, having a cellular telephone in the car can be an advantage when used to call emergency services. What do you think?

Reported Hazards Associated With Cellular Phones:

- Users are said to be distracted from defensive driving practices, and less responsive to highway traffic situations. When they do react, their response time is said to be longer.
- People on the phone are more likely to have intense conversations that involve problem solving. This is more distracting than shooting the breeze with a passenger.
- Passengers in the car often alert drivers to dangerous situations, and stop talking at such times. In contrast, someone on the other end of the line is unaware of the traffic situation.
- Cell phone users may be concentrating on dialing a number or handling the equipment and fail to notice a stoplight, traffic sign, or a vehicle in front of them.
- In addition to the driver on the phone, other drivers on the roadway are at increased risk from a cell phone user.

Safety Reminders For Cell Phone Users:

- Keep conversations short and sweet. Develop ways to get free of long-winded friends and associates while on the road. Don't use the cell phone for social visiting.
- Hang up in tricky traffic situations--without warning if necessary. Safe driving takes precedence over telephone etiquette. You can explain later-- because you'll still be alive!
- Resist dialing a number while on the move in heavy traffic, whenever possible wait until you are at a traffic light or stop sign.
- Keep even *more* distance between you and the car ahead of you than normally recommended.
- Consider using a "hands-free" speakerphone system, so you can keep your hands on the wheel and your eyes on the road-- and still keep talking. These speakerphones are available for many popular telephone models. Some states have proposed legislation that

requires use of these devices. Bear in mind that this doesn't increase your attention to the road, just your ability to maneuver the vehicle.

All drivers are at risk of having a vehicle accident before, during or after work, and the use of a cell phone may increase this risk. *Concentrate* on the above reminders! Don't become a statistic!
